*% detected as AI

AI detection includes the possibility of false positives. Although some text in this submission is likely AI generated, scores below the 20% threshold are not surfaced because they have a higher likelihood of false positives.

Caution: Review required.

It is essential to understand the limitations of AI detection before making decisions about a student's work. We encourage you to learn more about Turnitin's AI detection capabilities before using the tool.

Disclaimer

Our AI writing assessment is designed to help educators identify text that might be prepared by a generative AI tool. Our AI writing assessment may not always be accurate (it may misidentify writing that is likely human generated as AI generated and likely AI generated as human generated) so it should not be used as the sole basis for adverse actions against a student. It takes further scrutiny and human judgment in conjunction with an organization's application of its specific academic policies to determine whether any academic misconduct has occurred.

I want to get better at being academic by defeating my constant procrastination. The issue of procrastination was persistent in my life since primary school. Profuse procrastination regarding academic related things could pose severe psychological trauma, acute anxiety and worsening academic outcomes (Sirois & Pychyl, 2013; Tice & Baumeister, 1997). It is crucial to conquer procrastination and adopt a planned, active learning pattern to achieve my personal growth.

In order to set goals to conquer my procrastination, first I will first explain my own experiences and poor study behaviours. In my primary school period, my parents were hoping me to do well in school and they payed very much attention to my homework. My parents always give me extreme punishments whenever I have some minor mistakes or didn't get 100% marks in exams. This made me felt scared and anxious. So under the mad pressure of the fam, i just procrastinate on doing my homework/revision till the last minute so i wouldn't have to face the stress of doing something wrongly. If I look back to my childhood period, I can see that my parents practice authoritarian type of parenting which lead me to suffer from the problem of procrastination. Authoritarian parents are very demanding and controlling so it is very likely for children to be become nervous, susceptible to stress and afraid of failure (Baumrind, 1971). Finally, Wood (2013) points out that our self-concept is greatly influenced by a process called reflected appraisal, i.e. the way in which we think important others evaluate and see us. Through the process of internalization of my parents evaluation of me, I has linked my self-worth with 100% grades. Therefore, procrastination is the way for me to protect my self-esteem. If I procrastinate something, in case of bad outcome I can always say that it is because of the lack of time instead of the lack of ability. Through this, my external locus of control become more rooted (Hanna et al., 2010).

Well no fluffy promises....instead i've planned some self-monitoring tools which meet the "SMART" test to develop a studious approach & eliminate last minute cramming for the next month

As to 'S'(Specific) criteria, I will divide all following assignments into 3 subtasks, specifically analyzing the question and thinking about the idea to build a outline, making draft and finally doing final proofreading. By applying this aim-setting method specifically, I will not feel burdened by arduous academic tasks. As to 'M'(Measureable) criteria, I will keep on revising exam for 6 hours a week, that is from 7 pm to 9 pm, 2 hours for each session. on Tuesday, Thursday and Saturday. I'm going to keep track of my study progress using Yeolpumta app. It will give me the details of how long I studied and what I learned. In order to test my understanding, I will solve a set of past papers. If i get less than 70% accuracy, the next week i will spend extra time working on these weak topics. For "A" (achievable), I will have a quiet place set up at home for these regular scheduled fix-up sessions. The function of blocking application in Yeolpumta app is useful to avoid being distracted by digital devices. In order to make sure I'm consistent, if I happen to have some sort of un-avoidable event, I'll push it off to the next night (so it'll be this coming evening) to stay on track for the week. As to 'R'(Relevant) criteria, by controlling my regular study plan, my internal locus of control and positive self-concept will be enhanced. It proves that academic achievement is subject to consistent personal efforts (Hanna et al., 2010). As to 'T'(Time-bound) criteria, I will firmly go on with such structured plan in 1 month. and check my progress in every week. With this method, I can form a sustainable studying habit instead of falling into last-minute cramming.

And in the end, for me to break out of chronic procrastination and implement such a routine in order to learn is of crucial importance in maintaining my academic abilities and sanity. I know that I can get it.
